New

Current workspace: Fabric - Sandbox

Items will be saved to this workspace.

Data Activator

Monitor data to trigger alerts and automated actions so your organization adapts to changing conditions in real time.

Reflex (Preview)

Monitor datasets, queries, and event streams for patterns to trigger actions and alerts.

Reflex sample (Preview)

Monitor datasets, queries, and event streams for patterns to trigger actions and alerts with sample data.

Data Engineering

Create a lakehouse and operationalize your workflow to build, transform, and share your data estate.

Lakehouse

Store big data for cleaning, querying, reporting, and sharing.

Notebook

Explore data and build machine learning solutions with Apache Spark applications.

Environment (Preview)

Set up shared libraries, Spark compute settings, and resources for notebooks and Spark job definitions.

Spark Job Definition

Define, schedule, and manage your Apache Spark jobs for big data processing.

Data Factory

Empower your organization to get value from data faster than ever.

Dataflow Gen2

Prep, clean, and transform data.

Data pipeline

Ingest data at scale and schedule data workflows.

Data Science

Use machine learning to detect trends, identify outliers, and predict values from your data. [Learn more](#)

ML model

Use machine learning models to predict outcomes and detect anomalies in data.

Experiment

Create, run, and track development of multiple models for validating hypotheses.

Notebook

Explore data and build machine learning solutions with Apache Spark applications.

Environment (Preview)

Set up shared libraries, Spark compute settings, and resources for notebooks and Spark job definitions.

Data Warehouse

Provide strategic insights from multiple sources into your entire business. [Learn more](#)

Data Warehouse

Provide strategic insights from multiple sources into your entire business. [Learn more](#)

Warehouse

Provide strategic insights from multiple sources into your entire business.

Industry Solutions

Get a head start with industry-relevant connectors, transformations, and scenario-specific tools.

Sustainability solutions (Preview)

Solutions to help unify, harmonize and transform environmental, social, and governance data from disparate data sources to accelerate analytics and regulatory reporting for your business.

Retail solutions (Preview)

With Retail data solutions, manage retail data at scale to improve customer experience and drive operational efficiency across the organization.

Healthcare solutions (Preview)

Use advanced AI analytics to help close care gaps, generate new insights, enhance patient care and improve outcomes.

Power BI

Use data to find insights, track progress, and make decisions faster. [Learn more](#)

Report

Create an interactive presentation of your data.

Paginated report

Display tabular data in a report that's easy to print and share.

Scorecard

Define, track, and share key metrics for your organization.

Dashboard

Build a single-page data story.

Dataflow

Prep, clean, and transform data.

Datamart (Preview)

Provide strategic insights from multiple sources into your business-focused or departmental data.

Streaming dataset

Build visuals from real-time data.

Streaming dataflow

Combine and transform streaming data.

Real-Time Analytics

Find insights, track progress, and make decisions faster.

Eventhouse (Preview)

Rapidly load structured, unstructured and streaming data for querying.

KQL Database

Rapidly load structured, unstructured, and streaming data for querying.

KQL Queryset

Run queries on your data to produce shareable tables and visuals.

Eventstream

Capture, transform, and route real-time event stream to various destinations in desired format with no-code experience.

But still...why?

In what circumstances should you consider implementing a data platform (Fabric) as opposed to just using Power BI on top of your data sources?

Legacy

**Many systems,
historic data**

- Many data sources to orchestrate and join together
- High volume of data
- Provide a constant platform for continuity of reporting across system upgrades

Trust

**The single source
of truth**

- Highly manual reporting practices
- Various unreconciling versions of reports and metrics
- Can't trust in order to react or look ahead to action

Adoption of AI

The future is now

- “We need to be using AI in our business”
- What is the readiness of your data architecture?
- Fundamentals of governed, trustworthy data for use in these applications

Thank you
